Standing Investment

Important note about this report

This is the print-friendly version of your Benchmark Report. For the best experience, we recommend accessing the interactive HTML version available on the GRESB Portal. The online version includes dynamic features such as interactive visuals, expandable sections, and tooltips that are not available in this PDF.

For further guidance, please view the ["How to read your benchmark Report."](#)

As of 2026, scores will be displayed to one decimal place for greater transparency. Individual figures may not sum exactly to the total.

2026 GRESB Benchmark Report Standing Investments

ECE Preferred Equity Fund | ECE Real Estate Partners

GRESB Rating: 4/5

Participation & Score

Status: Non-listed
Strategy: Core

Peer Group Allocation

GRESB assigns a Predefined Peer Group based on the entity's characteristics to ensure consistency for all participants.

Participants also have the option to create a Customized Peer Group. You can read more about the functionality [here](#). The Customized Peer Group insights are limited to the ranking displayed above and do not impact other section of the Benchmark Report in 2026. Please note that neither the Predefined Peer Group nor the Customized Peer Group impacts the overall GRESB Score.

Please check the [Reference Guide](#) for more information.

*As of 2026, the Energy like-for-like figures shown here include Energy Efficient assets to provide a more complete view of portfolio performance; this display change has no impact on scoring.

Portfolio Intensities

This section provides insights in the Energy, GHG and Water Intensity profiles at the Portfolio level. 

Transparency and data integrity are critical enablers of operational performance and long-term value creation across assets in real estate portfolios.

Thanks to an industry-wide commitment to reporting Energy, GHG and Water data at the asset level, we are able to provide clearer and more granular data and insights as well as conduct asset-level validation with automated error and outlier checks. The algorithms are iterative; they will be developed based on feedback provided on an ongoing basis. The results provide access to consolidated performance at the portfolio level that is underscored by improved data quality at the asset level.

Intensities are a fundamental metric of environmental performance. These metrics can be used for measuring performance over time and for comparison against local/national targets and global goals.

Calculation methodology

In an effort to improve the representativeness of the Portfolio Coverage, the intensity for the Entity is calculated, provided they meet the following criteria:

1. Classified as Standing Investments

2. Data availability for the full year (>= 355 days)

3. Vacancy rate below 20%

4. Data coverage of 75% or more. *The intensity is linearly extrapolated to assume full data coverage, based on the actual asset data reported by GRESB Participants.*

Assets that don't meet the criteria above are excluded from the calculation of intensities to minimize potential skew relating to underlying data biases (e.g. consumption heterogeneity or seasonal effects).

GRESB uses the Gross Floor Area (GFA) of eligible assets as the denominator for determining intensities*. Assets with identified outliers substantially higher than the upper thresholds are excluded from the calculations, as defined in the GRESB Data Validation Process.

*GRESB Participants are required to use the GFA to report the size of their assets. Participants with information on the Lettable Floor Area (LFA) only are allowed to estimate the size of their common areas (difference between GFA and LFA) using ratio ranges pre-determined by GRESB.

Portfolio Characteristics	Intensity
Energy Assets with 75% data coverage or more 3 asset(s) 186427.43 m² 100% floor area covered 8.21% vacancy rate	 106.04 (kWh/m²)

Portfolio Characteristics	Intensity
GHG Assets with 75% data coverage or more 0 asset(s) 0 m ² 0% floor area covered N/A vacancy rate	 N/A
Water Assets with 75% data coverage or more 3 asset(s) 186427.43 m ² 100% floor area covered 8.21% vacancy rate	 294.78 (dm ³ /m ²)

Portfolio Improvement Targets (Summary)

	Type	Long-Term Target	Baseline Year	End Year	Externally Communicated
 GHG emissions	Absolute	40%	2019	2030	Yes
 Waste diverted from landfill	Absolute	75%	2019	2026	Yes
 Building certifications	Absolute	100%	2019	2026	Yes
 Data coverage	Absolute	90%	2019	2030	Yes
 Green electricity	Absolute	100%	2019	2026	Yes

Methodology used to establish the targets and anticipated pathways to achieve them:

 The underlying document applies to the reporting year 2025 and the respective entity. The targets included in the template were originally defined with an intended completion year of 2025.

Due to technical constraints within the GRESB reporting template, it is not possible to select the reporting year as the end year. Consequently, the end year has been recorded as 2026 for system purposes only.

This adjustment is purely technical and does not represent a change to the actual target timeline. The targets remain aligned with the entity's original objective of completion by the end of 2025.

Evidence:
 The Targets and KPIs are explained as follows:

- 1) Waste diverted from landfill: waste separation quota:
 75% of all waste is intended to be recycled. (p.2)
- 2) GHG:
 a reduction of 40% is aimed by ECE REP for its real estate portfolio. (p. 2)

3) Building certification:

100% of entities real estate portfolio should be certified (already achieved) (p. 57/ 67)

4) Data coverage:

90% of all long-term leases are aimed to comply with the Green Lease Standard (p. 66 - 67)

5) Green electricity: the goal is to use 100% green electricity in all shopping centres. In the German Shopping Centres, the target is already reached. (p. 2)

Additional targets, which are not stated here, are set out in the ESG Strategy of ECE REP (e.g. DEI targets, Risk management targets, health, safety and Wellbeing targets, Stakeholder targets etc.)

Net Zero Targets

Target Scope	Target Metric	Base Year	Base Year Performance	Short-Term Target Year	Short-Term Target Reduction (%)	Medium-Term Target Year	Medium-Term Target Reduction (%)	Long-Term Target Year	Long-Term Target Reduction (%)
Scope 1+2 (market-based)	Absolute	2019	-	-	-	2030	40%	2040	100%

Target validation and framework details

Is the target aligned with a Net Zero target-setting framework?	✓ Yes Net zero target-setting framework: Paris Agreement
Is the target science-based?	No
Is the target validated by a third party?	No
Is the target publicly communicated?	✓ Yes URL: https://www.ecerep.com/esg

Methodology used to establish the target and the entity's plans/intentions to achieve it

 The holistic sustainability strategy takes the expectations of investors and other stakeholders such as tenants, visitors and employees into account. The "Net Zero" objective means achieving a balance between the amount of greenhouse gases emissions produced and those removed from the atmosphere to reduce global warming. The AIFM believes reducing these greenhouse gas emissions is key in generating a positive impact on climate change. As a result, the ECE REP ESG strategy is to set a goal of being net zero by 2040 as part of the Paris Agreement, signed in 2015. To achieve the set net-zero goal, ECE REP has already initiated first measures and is further advancing the transition to green electricity in the common areas of the centers. Additionally, the fund's centers have already been benchmarked against the property-specific decarbonization pathway (CRREM-Assessment, which is aligned with SBTi). The results will be used to derive an appropriate action plan. For this purpose, measures are also being derived to more accurately capture the actual conditions in the centers (e.g., capturing tenant consumption by rolling out Green Lease Standards in the lease agreements).

Building Certifications

Building Certifications at the time of Design/Construction

Portfolio		
	Certified Area	Total Certified Assets
Total	0%*	0

*In case of assets certified more than once, this number is capped at 100% after aggregation. The Certified Area % accounts for ownership at the asset level but does not account for the Time Factor nor the Validation Status of the certifications.

Operational Building Certifications

Portfolio		
	Certified Area	Total Certified Assets
DGNB	Buildings In Use Gold	100%
	Sub-total	3
Total		100%*
		3

*In case of assets certified more than once, this number is capped at 100% after aggregation. The Certified Area % accounts for ownership at the asset level but does not account for the Time Factor nor the Validation Status of the certifications.

Energy Ratings

Portfolio		
	Rated Area	Total Rated Assets
EU EPC - Germany (Non-residential)		100%
		3
Total		100%
		3

*In case of assets certified more than once, this number is capped at 100% after aggregation. The Certified Area % accounts for ownership at the asset level.
